

Evolving the needs of Health Management

MedTech Evolution is among the most advanced Health Management systems available today. It is flexible and adaptable to the needs of an evolving Health system. Its user-friendly interface and extensible design make MedTech Evolution the perfect Health Management system for medical practices, hospitals, managed service and corporate health service providers.

MedTech Evolution focuses on improving the quality and efficiency of health care service delivery by providing user-friendly tools to help health care professionals deliver the highest quality care.

medtech **EVOLUTION**

Simplicity, Modularity and Depth

Modules

Demographics

Records containing extensive information on patient demographics offer the opportunity for comprehensive and automatically generated reports. All of the information required by practices for patient enrolment, consent and status, are also captured.

Clinical

Provides a strong audit trail covering medications, disease management and coding. There's also an 'Outbox' with the facility to merge clinical information, generating a wide range of letters and referrals.

Recalls and Screening

This module enables the generation of screening and recall templates necessary for any special requirements, as well as the basic recalls including: hypertension, cervical screening and diabetes.

Prescribing

The prescribing module features an integrated formulary, providing comprehensive information on drug interactions and pharmaceutical funding. To ensure all information is current, the formulary database is updated each month electronically or by disc.

Accounts

Comprehensive accounting functions with the ability to generate a wide range of standard and customised reports. Claiming from government agencies can be developed to process electronically.

Appointments

A full range of appointment booking functions and appointment types. This popular feature gives Front Desk staff the ability to schedule patient appointments with individual providers across multi-disciplinary and single provider practices.

Multimedia Capability

Templates are available within this module of various anatomical pictures. Users can draw on these pictures and import digital images into this module for reference. This includes all forms of multimedia.

Health Management Tools

These health management tools and utilities include Medical Calculators, Cardiovascular Health Assessment Tools for the management of various chronic diseases.

Resource and Equipment Management/Venue Management

This feature provides users the ability to assign staff or equipment to a procedure or consultation and set up various rooms linked to a venue used by specialists for a procedure.

Electronic Patient Connectivity

The product has the ability to interface with a rich patient health and wellness portal and enables the provider to interact with the patient electronically.

When MedTech Evolution is used in conjunction with ManageMyHealth, the patient communication portal, it will establish a valuable electronic relationship between medical professional and patient.

Onsite and In-house Training and Support

MedTech can provide customised and personalised training with its dedicated team of Training & Support Consultants, whose collective experience covers all facets within the Health Sector.

MedTech Evolution – intelligent, integrated and streamlined.

Features

- Variety of Deployment and Hosting Options including LAN, WAN, PDA or Tablet, PC or Laptop
- Integrated Error Handling Functionality that classifies errors into common groups to enhance error resolution
- Enhanced ability to easily integrate with third party applications like ERP and financial applications
- Agile functionality providing a customizable platform for add-on modules plus facilitation of specialized bespoke modular development
- Enhanced Security and Auditing functions that ensure confidentiality of patient data. Integrates with patient health and wellness portal for an enhanced relationship with the patient.
