Purpose of Announcement

PCEHR `getDocumentList` v `getView` implementation

Please be advised that Medtech Global has been notified by the Dept of Health that there may be a small number of Medicare, prescription and dispense documents *missing from the PCEHR views* which may affect your clinical use of Medtech32.

Medtech Global is advised that the Document List can still be depended upon but *please check your filter settings* as a precautionary measure.

What you need to do now

In this interim period, Medtech Global asks that you use the Document List rather than relying solely on the PCEHR View Screens for making clinical decisions until further notice.

Medtech Global is expecting further advice to be forthcoming in December 2014 and will advise when this issue is resolved by the Dept of Health.
