Medtech Evolution is used in General Practices (GPs), Specialist Practices, Allied Health Clinics, Hospital Emergency Departments and medical research facilities.

Modular, flexible, customisable workflow
Not all clinics are the same so Medtech Evolution allows for customised, flexible views for front desk, clinical consultations and accounting functions which can differ between users. Users are not locked into a strict, structured workflow for patients unless desired. We think you should work the way you want, not the way you are told.

Customised, advanced forms for improved workflow
Medtech Evolution allows for paperless patient registration forms, customised assessment and diagnosis forms, and customised treatment and prevention plans. These forms also allow for weighted calculations which can be used for diagnosis scoring, goal setting and assessment forms which are measurable and reportable in Medtech Evolution as well.

Flexible query builder for intelligent reporting
Intelligent reports can be created for accounting, clinical analysis and patient contact using any fields in the Medtech Evolution database without having to be a technical expert. Medtech clients use this for financial analysis and targeted marketing. For example any patient demographics and records can be chosen like whether they are in a certain age bracket and have not had a particular vaccination and then contacted with a bulk SMS, email or other chosen method instantly.

Role based security
In Medtech Evolution, access to patient records and documentation is managed by role based security permissions to ensure the utmost privacy and integrity of your clinical information.

Take the Medtech Evolution tour

Front Desk
- Customisable views and configurations
- Paperless patient registration forms which populate directly into the patient record through ManageMyHealth
- The fastest appointment setter in the industry
- Book for multiple locations
- Book resources like rooms, devices and people
- Group booking capability
- ManageMyHealth online appointment integration
- Replyable SMS integration into the appointment book
- TYRO, Healthpoint and Eclipse integration
- Flexible task lists
- Waiting room which can allow for rapid patient triage
- Fully integrated with My Health Record

Clinical
- Customisable clinical display for each clinician
- Customisable workflows and checklists which directly populate patient records e.g. travel vaccinations
- Smart, customisable care plans share and cross populate patient vitals including laboratory results
- ‘Briefcase’ backs up all patient data on devices used offsite with Evolution’s sophisticated data verification tool to ensure NO loss of data when the device plugs back into the network
- The easy to use digital drawing tool integrates with Microsoft Ink for Microsoft Surface and Windows 10 tablets
- Screening module with intuitive keywords or customise your own shorthand references for quicker consultations
- Medical calculation tools allow for instant calculation of patient risk factors like chronic disease management and mental health
- Integration with eRX script exchange for real-time prescription monitoring including SafeScript

Accounting
- Medtech Evolution’s Quick Billing module and integration with Tyro and HealthPoint completes billing in just a few clicks
- Eclipse is included in Medtech Evolution free of charge
- Fully integrated with Medicare Easyclaim for instant claiming connection
- The flexible Query Builder means convenient use of our standardised reports or create new templates without having to be a tech expert
- Corporate billing and WorkCover functionality is available
- Aged debt reporting is clear and simple
Making the transition easy

Try our FREE trial data conversion
Fully supported by our data specialists.

Try before you buy
With remote access to our Medtech Evolution cloud server.

VIP Support
Our friendly customer support staff can answer any of your questions.

Customisable to how you want it
Design your own workflows, configurations, short-cut keys and naming conventions.

Personalised in-clinic or remote training and e-learning suites available
Our training team are here to support your transition and can be augmented by our webinars and Medtech Master e-learning suite.
